Bus Battle

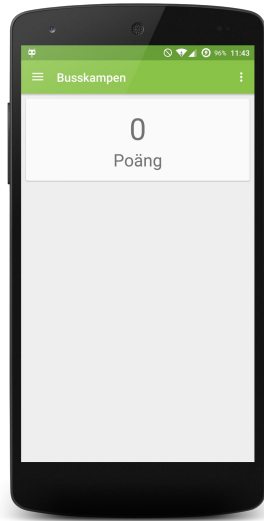

Version 1.0
By Signal Unknown

Bus Battle

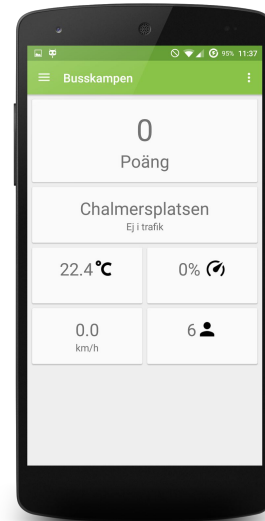

Bus Battle is an app for competing in who travels the longest with the ElectriCity busses in Gothenburg. The app notices when you step on or off a bus and measures how far you have travelled. You can then compare your results with those of your friends.

Your score is used to display some statistics about your travelling, such as how much CO₂ you have saved when choosing to travel by electric buses instead of by car. You can also see some info about the buses, such as their position and speed.

Home screen

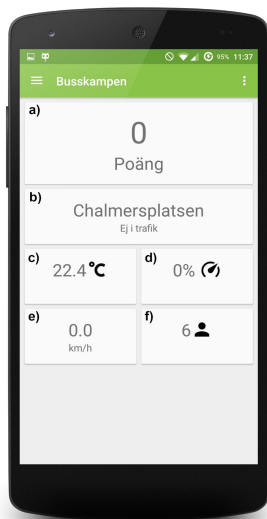

Home screen while not on bus

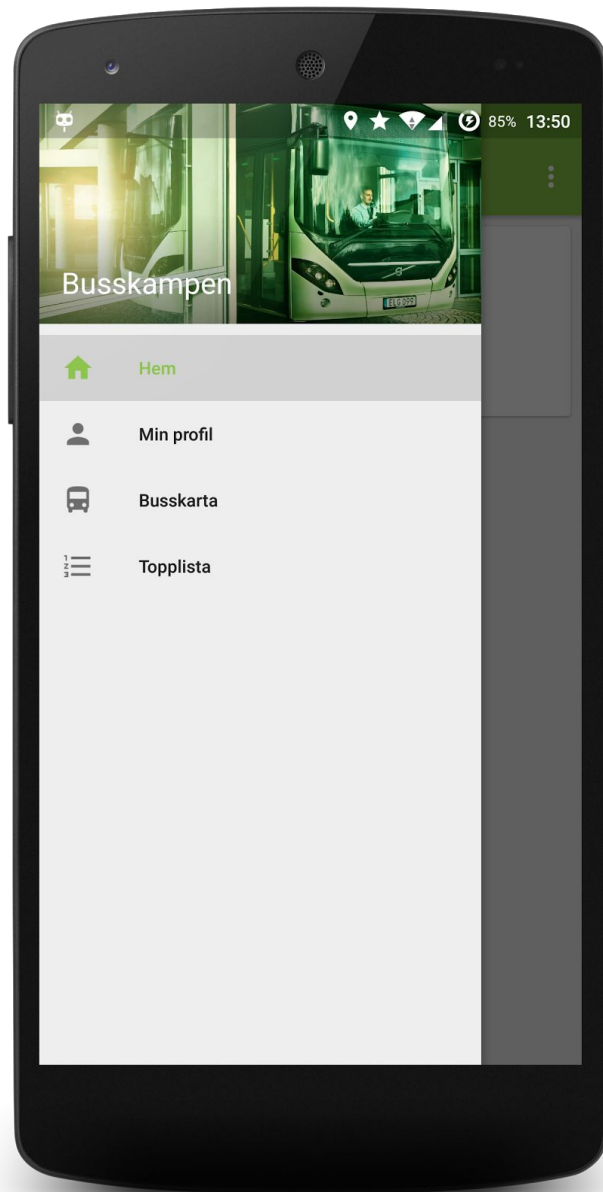

Home screen while on bus

The home screen is the screen you will be presented with the first time you open the app. The home screen has a different appearance depending on whether or not you are currently on a bus. Please note that there will be a delay of about 30 seconds when stepping on/off a bus. You will always find your current score on this screen, both while on and not on a bus. If you are on a bus your score will be updated live and you will find some interesting statistics about the bus you are currently on, see the table below for detailed info about the statistics being displayed.

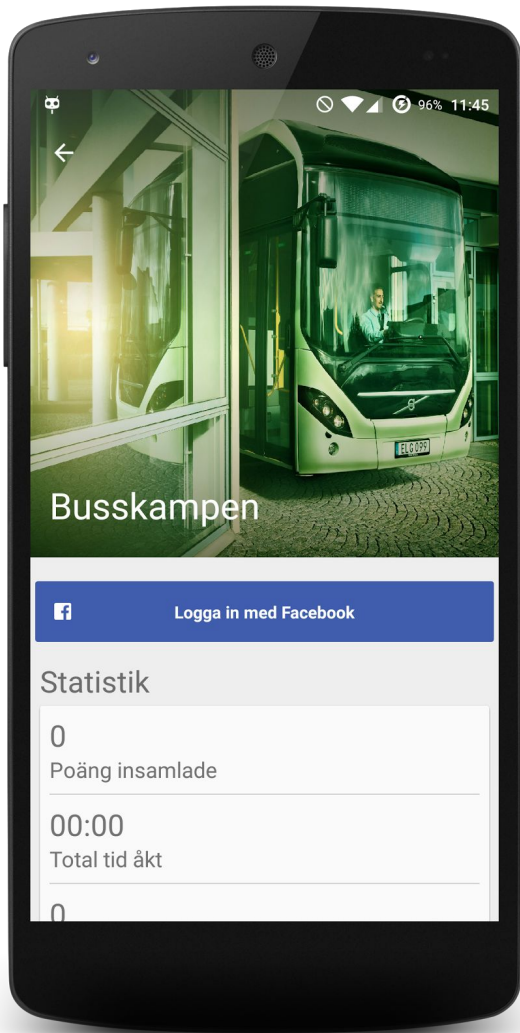

- a) Your current score
- b) Next stop and the destination for your current bus
- c) The temperature in your current bus
- d) Indicates how far the driver pushes down the gas pedal
- e) The current speed of the bus
- f) The amount of people connected to the wifi of the bus

Menu

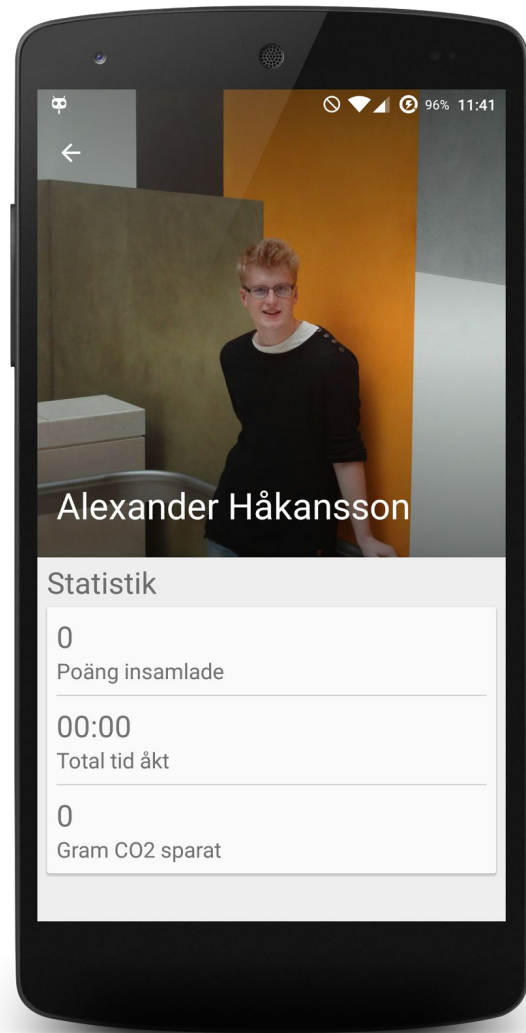

The menu is the main way to navigate between the different screens of the app. The menu is accessed either by pressing the menu icon  in the top-left corner of most screens or by swiping from left to right at any part of the screen where the menu icon is visible. If the menu icon is not visible a “return” icon will be visible instead taking you to the previous screen, which will have the menu icon visible. The menu contains labeled buttons, each of which will take you to the indicated screen.

My profile

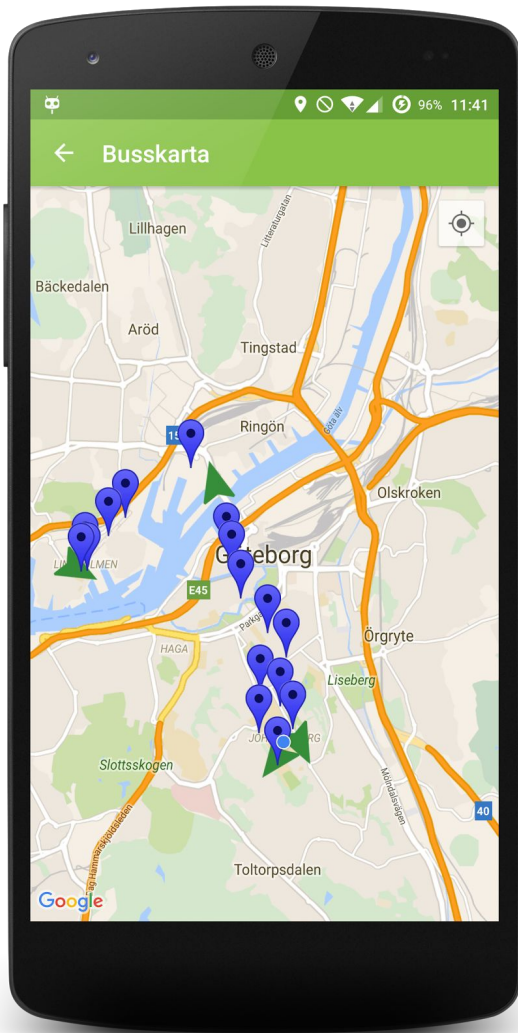

My profile screen when not logged in to facebook

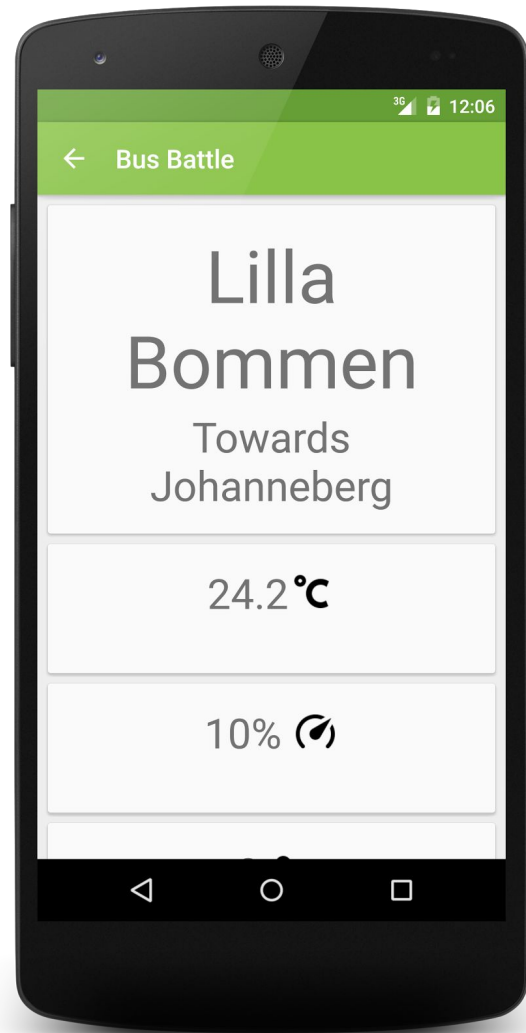

My profile screen while logged in to facebook

At the “My profile” screen you will find some basic statistics about your bus travelling. From here you can also choose to connect to facebook. This will sync your score and make you able to compare your score with your facebook friends (see “Highscore list” later in this documentation).

Bus map

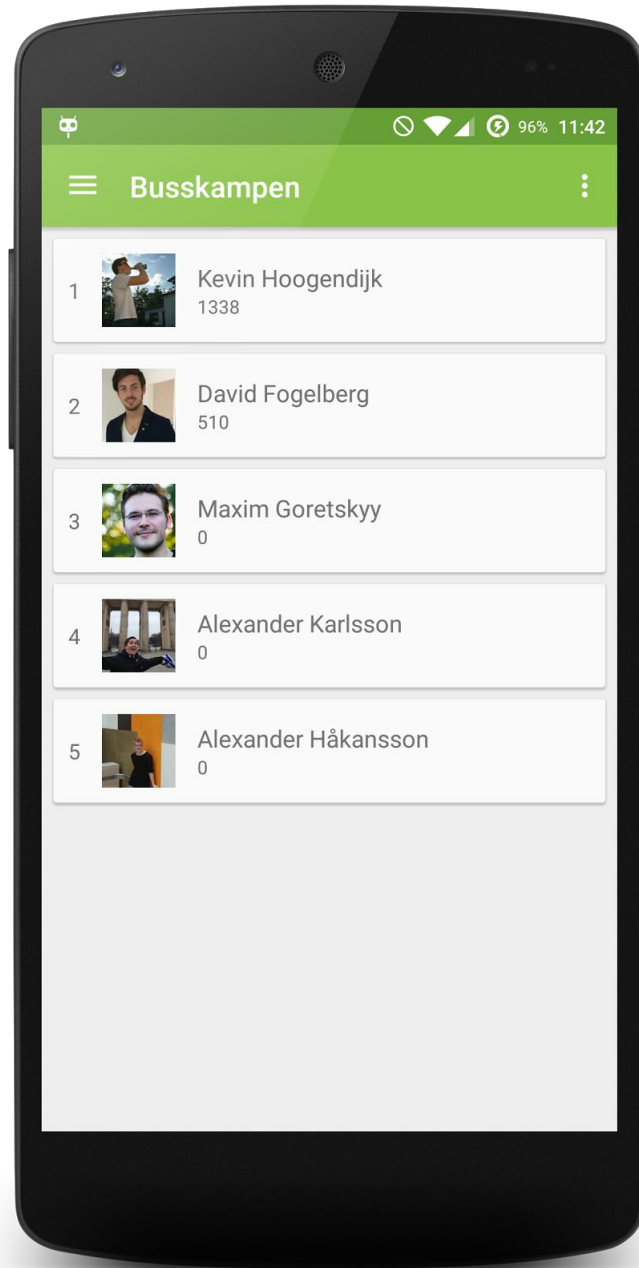

The bus map

Info about a bus from the map

On the bus map you can see the position of each bus stop for the ElectriCity buses and the live positions of all ElectriCity buses. If your device has GPS available and turned on - your own position will also be visible on the map. When a bus on the map is pressed you will be taken to a new screen with info about the bus you just pressed. This is the same info that you would get on the home screen if you were sitting on a bus.

Highscore list

The highscore list contains a list of your facebook friends scores and your own score. If you have not connected to facebook via "My profile" you will also have the option to do so from here. If you are not connected to facebook a highscore list can not be shown.
